1   Spam!   **87%**
Lorrie Faith Cranor , Brian A. LaMacchia
Communications of the ACM August 1998
Volume 41 Issue 8

2   Rethinking the design of the Internet   **85%**
Marjory S. Blumenthal , David D. Clark
ACM Transactions on Internet Technology (TOIT) August 2001
Volume 1 Issue 1
   This article looks at the Internet and the changing set of requirements for
   the Internet as it becomes more commercial, more oriented toward the
   consumer, and used for a wider set of purposes. We discuss a set of
   principles that have guided the design of the Internet, called the
   end-to-end arguments, and we conclude that there is a risk that the range
   of new requirements now emerging could have the consequence of
   compromising the Internet's original design principles. Were ...

3   Current technological impediments to business-to-consumer electronic   83%
commerce
Gregory Rose , Huoy Khoo , Detmar W. Straub
Communications of the AIS June 1999

4 Information retrieval on the web   83%

Mei Kobayashi , Koichi Takeda
ACM Computing Surveys (CSUR) June 2000
Volume 32 Issue 2

In this paper we review studies of the growth of the Internet and technologies that are useful for information search and retrieval on the Web. We present data on the Internet from several different sources, e.g., current as well as projected number of users, hosts, and Web sites. Although numerical figures vary, overall trends cited by the sources are consistent and point to exponential growth in the past and in the coming decade. Hence it is not surprising that about 85% of Internet user ...

5 A social reinforcement learning agent   82%

Charles Isbell , Christian R. Shelton , Michael Kearns , Satinder Singh , Peter Stone
Proceedings of the fifth international conference on Autonomous agents May 2001

We report on our reinforcement learning work on Cobot, a software agent that resides in the well-known online chat community LambdaMOO. Our initial work on Cobot~\cite{cobotaaai} provided him with the ability to collect {\em social statistics\/} and report them to users in a reactive manner. Here we describe our application of reinforcement learning to allow Cobot to proactively take actions in this complex social environment, and adapt his behavior from multiple sources of human reward. A ...

6 Using Postfix for Secure SMTP Gateways   82%

Mick Bauer , Brenno de Winter
Linux Journal October 2000

Improve your site's e-mail hygiene and make life difficult for spammers and hackers.

7 Specification, validation, and synthesis of email agent controllers   82%

Robert J. Hall
Proceedings of the third workshop on Formal methods in software practice August 2000

With a few exceptions, previous formal methods for reactive system design have focused on finite state machines represented in terms of boolean states and boolean next-state functions. By contrast, in many reactive system domains requirements engineers and developers think in terms of complex data types and expressive next-state functions. Formal methods for reactive system design must be extended to meet their needs as well. I term a reactive system function rich if expr ...

11 On secure and pseudonymous client-relationships with multiple servers 80%
Eran Gabber , Phillip B. Gibbons , David M. Kristol , Yossi Matias , Alain Mayer
ACM Transactions on Information and System Security (TISSEC) November
1999
Volume 2 Issue 4
> This paper introduces a cryptographic engine, Janus, which assists clients
> in establishing and maintaining secure and pseudonymous relationships
> with multiple servers. The setting is such that clients reside on a particular
> subnet (e.g., corporate intranet, ISP) and the servers reside anywhere on
> the Internet. The Janus engine allows each client-server relationship to use
> either weak or strong authentication on each interaction. At the same time,
> each interaction preserves privacy by neithe ...

12 Netman: a learning network traffic controller   77%
Bernard Silver
Proceedings of the third international conference on Industrial and engineering
applications of artificial intelligence and expert systems June 1990
> One of the goals of Machine Learning is the production of software that can
> improve itself. Such software can learn from experience and adapt to
> changing situations and requirements. In addition, such software can
> refine its knowledge-base, perhaps leading to a level of expertise beyond
> that of human experts. This paper describes NETMAN, a knowledge-based
> program that uses a machine learning technique, Knowledge-based
> Learning, in the domain of Network Traffic Co ...

13 Machine learning in automated text categorization   77%

Fabrizio Sebastiani
ACM Computing Surveys (CSUR) March 2002
Volume 34 Issue 1
  The automated categorization (or classification) of texts into predefined
  categories has witnessed a booming interest in the last 10 years, due to
  the increased availability of documents in digital form and the ensuing
  need to organize them. In the research community the dominant approach
  to this problem is based on machine learning techniques: a general
  inductive process automatically builds a classifier by learning, from a set of
  preclassified documents, the characteristics of the categories. ...

14 PicASHOW   77%

Ronny Lempel , Aya Soffer
ACM Transactions on Information Systems (TOIS) January 2002
Volume 20 Issue 1
  We describe PicASHOW, a fully automated WWW image retrieval system
  that is based on several link-structure analyzing algorithms. Our basic
  premise is that a page *p* displays (or links to) an image when the author of
  p considers the image to be of value to the viewers of the page. We thus
  extend some well known link-based WWW *page retrieval* schemes to the
  context of image retrieval.PicASHOW's analysis of the link structure
  enables it to retrieve relevant images even when those ...
